MONTHLY MEETING · OCTOBER 2026

SayaKaya October Review

September 2026 performance, with August for comparison. Data through 29 October.

VERSION 3 · REFRESHED FROM THE VERSION OF 8 OCT, NOW THROUGH 29 OCTOBER. FIGURES UPDATE THEMSELVES; CLAIMS ABOUT OCTOBER ARE CHECKED AT EACH REFRESH.

READ THIS BEFORE THE FIRST NUMBER

The **RAIZ user segment is excluded from every figure in this deck**, including app behaviour: accounts with a RAIZ or RAIZKAYA referrer code. Every AUM and holdings figure also excludes **Avrist Liquid Fund and Avrist Indeks LQ45**, same as last month. Numbers here will be lower than the dashboard, which counts the full book. **New this month:** app activity from Google Analytics now joins investor records (1,544 of 1,545 app user IDs in September match an account).

the Rp 50 B account was out 29 Oct to 29 Oct, still out; lowest close in October 206.5 B

Three of these six numbers are **one account**. It switched Rp 50.7 B into a lower-fee fund on 4 Sep, sold Rp 50.0 B on 29 Sep and bought it back on 6 Oct. Without it, September's net flow was **−5.6 B**, the second month in a row close to zero after five months of broad outflow. Registrations rose for the first time since January.

02 · TRAJECTORY

August → September → October

October is 29 of 31 days. Pace scales the 29-day total to a full month; balances and people counts are never projected. Buys, sells and total flow get no pace: one Rp 50 B order makes a projection meaningless. *The Rp 50 B account was out for 1 of the 29 days (29 Oct to 29 Oct), back since.

THE NUMBER NOBODY WILL SPOT ON THEIR OWN

Everyone except that account bought **19.0 B** in August and **7.4 B** in September, 61% less, from almost the same number of buy orders (689 → 652). The larger buyers paused; small buying carried on.

01 · WHERE WE ENDED SEPTEMBER

AUM has held at 250 to 260 B for three months

PLATFORM AUM, AVERAGE DAILY BALANCE PER MONTH · RP BILLION · EXCL. RAIZ, 2 FUNDS · LAST POINT: CLOSE ON 29 OCT

September averaged 260.0 B (+2.5%). October's 29-day average (244.5 B) is left off the line: the Rp 50 B account was out for 1 of those days (29 Oct to 29 Oct), still out. Its close on 29 Oct, 208.7 B, is plotted instead. The last closes sit 48.9 B lower than 27 Oct with no order behind it; ask the MI before the meeting.

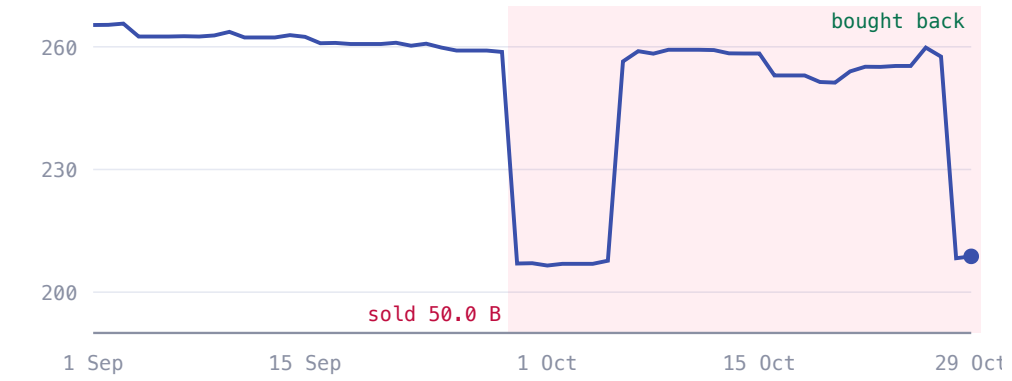

WHY THE LINE IS FLAT BUT THE MONTH WAS NOT

One account is **0.5% of AUM today** (Rp 1.0 B of 208.7 B), so every month-level figure moves with it. From this deck on, flows are shown with and without it.

CORRECTION TO LAST MONTH

Last month we called August's +48.3 B broad participation. **50.0 B of it was this account**; everyone else was –1.7 B. Our holdings check compared 31 Jul with 31 Aug, and the money was in place on both dates.

WATCH THE END OF OCTOBER

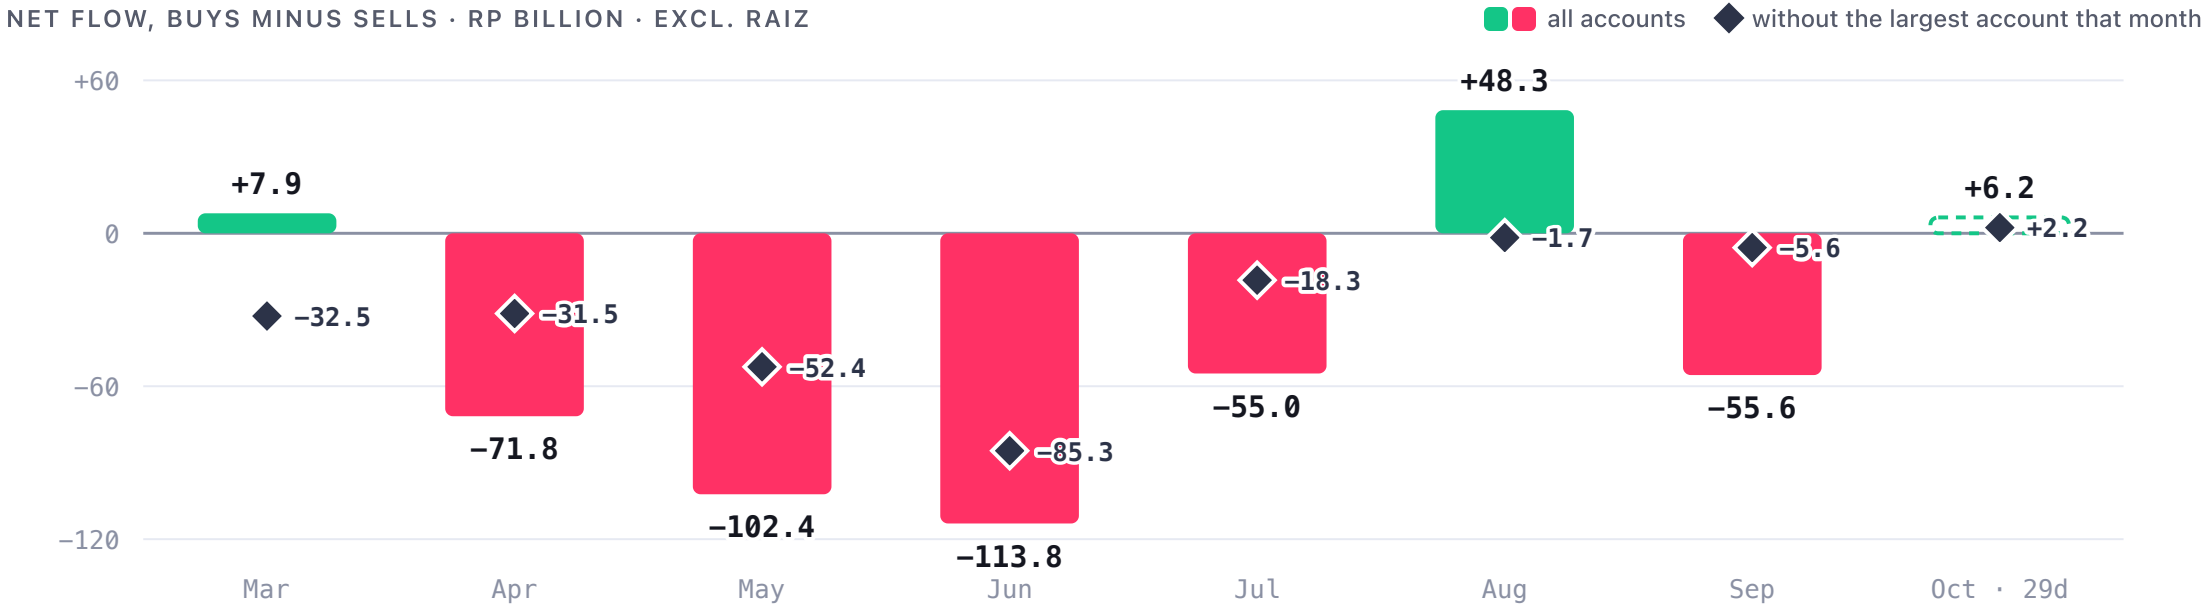

Three exits so far, all on the 29th to the 31st of the month (May, July, September). If that holds, expect about **–50 B around 29 to 31 October**. A pattern, not a known plan: worth asking whoever looks after this account.

WHAT IT IS WORTH

At Sharia Balanced's 0.75% a year to us, Rp 50 B earned about **Rp 31 M a month**, a fifth of fee revenue. In Money Market (0.50%) it earns about Rp 21 M.

02 · CAUSE

Without one account, net flow has been close to zero since August

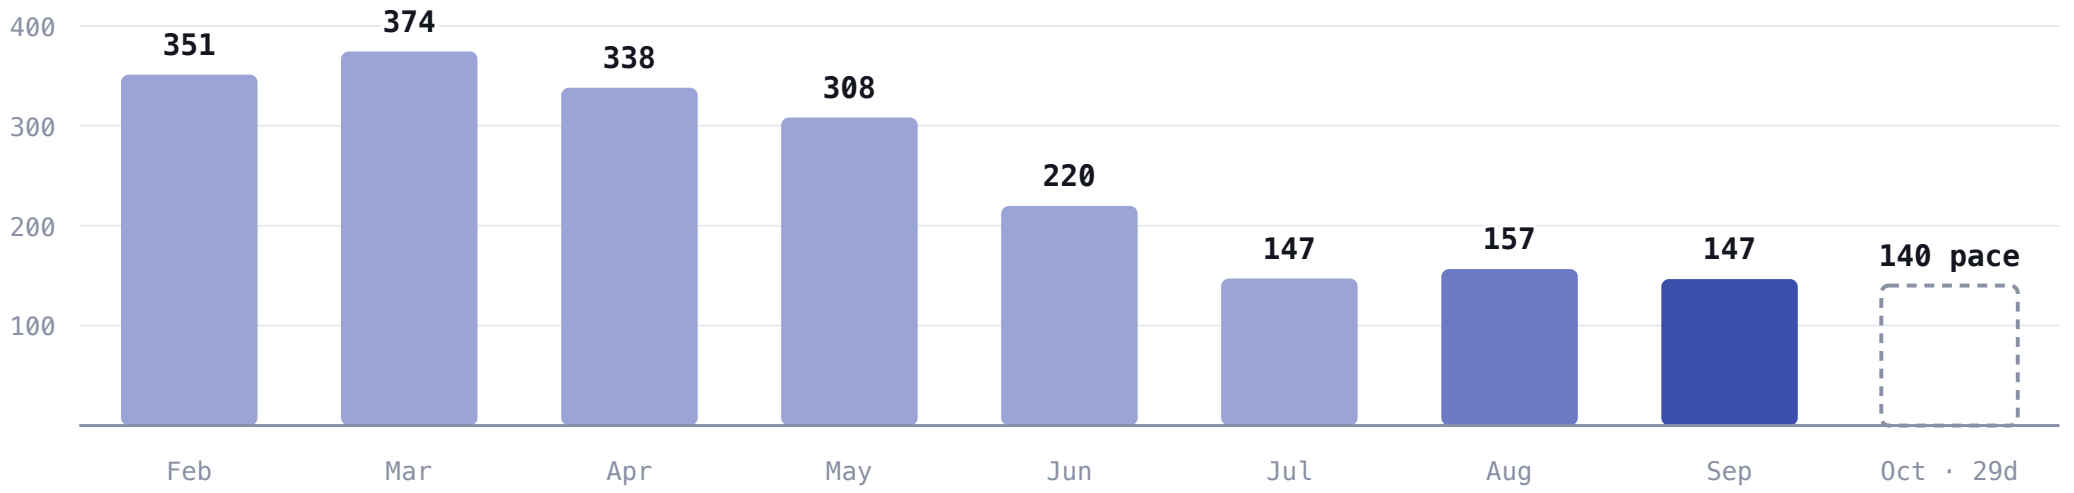

From March to July, flow without the largest account ran −18.3 B to −85.3 B a month: broad redemptions. Since August it has been **−1.7 B**, **−5.6 B** and +2.2 B so far in October. The broad outflow stopped in August; the big swings since then are one account.

01 · WHERE WE ENDED SEPTEMBER

AUM up 2.5%, fee revenue down 6.3%

PLATFORM FEE REVENUE, APERD SHARE · RP MILLION PER MONTH · EXCL. RAIZ, 2 FUNDS

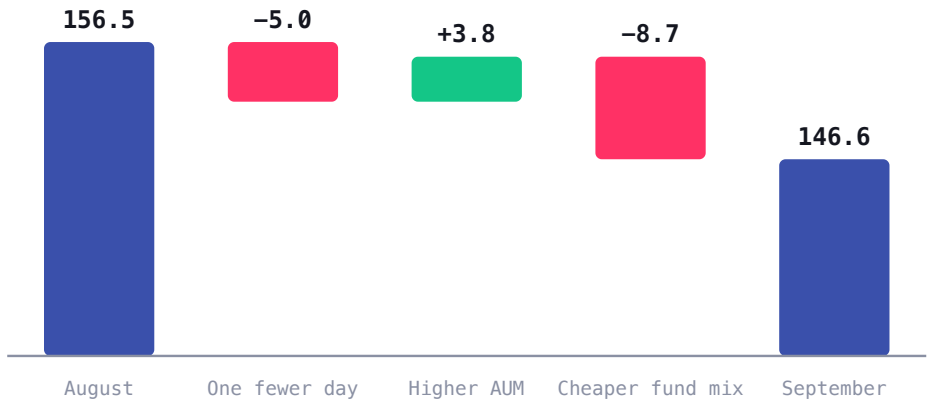

September earned **146.6 M**, 9.9 M less than August, even though average AUM rose. October's 29-day pace (140.1 M) understates the month: the Rp 50 B account was out for 1 of the 29 days (29 Oct to 29 Oct), still out. Next: where the money went.

02 · CAUSE

The 9.9 M went on a cheaper fund mix

Revenue = days × average AUM × fee rate, so the change splits exactly into three parts. Average AperD rate across the book: 0.727% → 0.686% a year.

APERD REVENUE, AUGUST TO SEPTEMBER · RP MILLION

STAR Stable Income Kelas Utama	STAR Infobank 15 Kelas Utama	1	3.2 B
STAR Stable Amanah Sukuk	STAR Infobank 15 Kelas Utama	1	3.2 B

One rotation did most of it: **75.1 B** moved from Sucorinvest Sharia Balanced Fund (0.75% a year to us) to Sucorinvest Money Market Fund (0.50%) across 14 accounts between 1 Sep and 25 Sep, the Rp 50 B account included. At the new mix that is about **Rp 15.6 M a month** less in fees. A switch never shows up as an outflow, which is why AUM looked fine.

WHAT THIS MEANS FOR REPORTING

With one account at a fifth of AUM, a monthly average mostly reports that account. This deck shows flow with and without the largest account; the dashboard's Top investors tab lists the accounts behind the top-10 share.

02 · CAUSE

No order explains it. Units held were unchanged that day and net flow was +0.4 B, yet the book fell 5.8 B. The funds repriced instead: −14% to −9% in one day. A redemption moves units; a repricing does not.

investors came from three referrers. The busiest referrer brought 23 signups and 4 investors.

CLOSED FROM LAST MONTH

none of the 19 referrers uses a sayakaya.id email, and the top six all hold verified accounts with their own buying history. The bonus pays only on a funded first purchase, so unfunded signups cost nothing: the gap is who they reach, not fraud.

04 · NEW: APP BEHAVIOUR

We can now see what investors do in the app

Last month's blocker #3 was that Google Analytics did not join to investor records. It does: the app sets user_id to the investor's account at login, and 1,544 of 1,545 September IDs match. RAIZ (250 app users) excluded.

THE AUDIENCE NOBODY IS TALKING TO

78 KYC-verified people spent a median **7.6 minutes** in the app in September, longer than investors (4.1), and none bought. The warmest audience we have, and nothing is aimed at them yet.

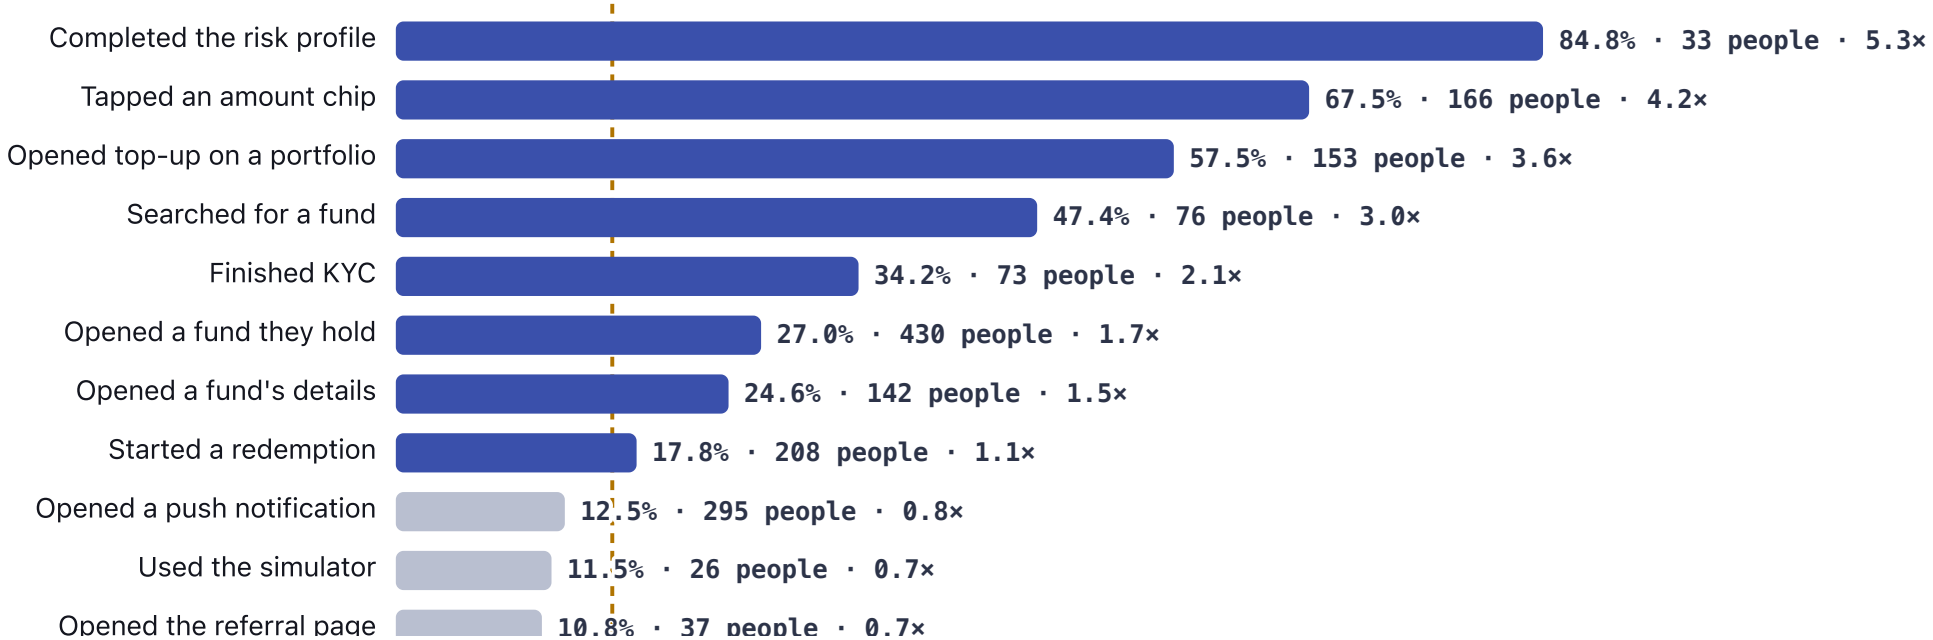

WIN-BACK IS GETTING HARDER

Investors who sold everything but still open the app bought **23.5%** of the time in September, down from 23.7% in August. Holders bought 30.3% (33.6%).

04 · NEW: APP BEHAVIOUR

What buyers do before they buy

Share of people who completed a buy within 7 days of first doing each action in September. Steps inside the buy flow itself are left out.

Completing the risk profile is the strongest signal outside the buy flow: **84.8%** went on to buy, 5.3× the average. Opening a push notification sits **below** average (12.5%).

READ WITH CARE

These are habits of people who buy, not proof of what makes them buy. They are useful for choosing who to talk to, not for claiming a feature drives sales.

04 · NEW: APP BEHAVIOUR

Money market converts; equity gets looked at

Sucorinvest Money Market Fund turned 32.9% of viewers into buyers. The most-viewed fund, **Sucorinvest Maxi Fund Kelas A**, converted 9.4% of 139 viewers. Interest in equity is there; the step from looking to buying is where it stalls.

HOW IT'S COUNTED

Opened the buy form or created an order in the app during September, with no paid buy (completed, payment received, or verified) from then until three days after their last try. > **The app is a funnel instrument, not the ledger.** Where it fires it matches the account: 80.1% of the month's payers sent payment_complete, and the gap is a channel problem rather than a data problem (virtual account 28 of 91, bank transfer 27 of 123, QRIS 4 of 25). Virtual accounts finish on the bank's page, so the app never sees the return. Backoffice stays the source for paid; GA4 is the source for intent.

Joined on `user_id` = `main.users.id`, events read by the Asia/Jakarta day they happened. **register_success is not a signup count:** 125 of its 217 events in September belong to accounts created before that day, 46 of them on 1 Sep alone, when a release re-fired the event. By October it is clean: 95.9% of events land on the account's own day. The paid and KYC rows are unaffected.

Signups are the backoffice records created in October; each later step is that same set of people, so the rows are comparable. "Verified" and "Paid" come from backoffice, "opened" and "started KYC" from GA4: the app steps are a floor, they only count people the app could see.

BETTER THAN IT LOOKED

August's cohort repeat-bought **50%** in its first month now that the month has closed. Last deck showed 28% partway through.

September brought **35 first-time buyers**, the most since January, in step with registrations and the referral program.

HOW TO READ IT

A cohort's M+n is the share who bought again n months after their first purchase month. Small cohorts (16 to 40 people) move several points on one or two people.

ACTION ITEMS

1. **Top line**: the 5.8 B the book lost on 16 Oct was fund pricing, not a redemption: units held were unchanged and flow that day was +0.4 B. Confirm the NAV print with the MI.
2. **Rp 50 B account**: ask whoever looks after it whether the month-end exits are planned. Three so far, all on the 29th to 31st; the next would land around 29 to 31 Oct.
3. **Sharia Balanced → Money Market**: 75.1 B across 14 accounts cut the fee rate from 0.727% to 0.686%. Find out whether it was advised.
4. **Use the app data**: message the 78 verified non-buyers and the 38 who started buying (lists in User behavior) instead of broadcast campaign pushes.
5. **Email tracking**: switch on SES event publishing (about 10 minutes in the AWS console) so Email recap shows delivered, opened and clicked from November.
6. **Campaign data**: used_quota still 0 on every campaign, bonus_amount missing on 7 of 12. Second month.
7. **UTM / channel field** on the user record: still missing; Adjust covers installs only. Fourth month.
8. **HNWI-support workflow** for accounts over Rp 1 B: no change visible in the data; status needed.
