

SayaKaya September Review

August 2026 performance, with July for comparison. Data through 15 September.

READ THIS BEFORE THE FIRST NUMBER

The **RAIZ user segment** is excluded from every figure in this deck — accounts with a RAIZ or RAIZKAYA referrer code, a large, mostly dormant set with minimal AUM and activity. Every AUM/holdings figure also excludes two funds — **Avrist Liquid Fund** and **Avrist Indeks LQ45** — a new rule this month. Numbers here will be lower than the dashboard, which still counts the full book.

The month in six numbers

AUM · AUG DAILY AVG

253.7 B

+3.1% vs Jul avg

PLATFORM FEE (APERD)

156.5 M

+6.3% vs Jul — 1st rise since Mar

NET FLOW

+48.3 B

best month since March

NEW REGISTRATIONS

100

down again, fewest since tracking began; still blind on why, no UTM field

ACTIVE INVESTORS (30D, COMPLETED BUYS)

321

of 7,099 who ever bought

AUM · SEP DAILY AVG (14D)

263.4 B

+3.8% vs Aug avg

August is the first month where AUM, revenue, and net flow all moved the **same direction** since the decline began — AUM +3.1%, revenue +6.3%, net flow **+48.3 B**, the best since March. But September's first 14 days have already slipped back to **-2.5 B** net, too early to call a trend, worth watching next month.

July → August → September

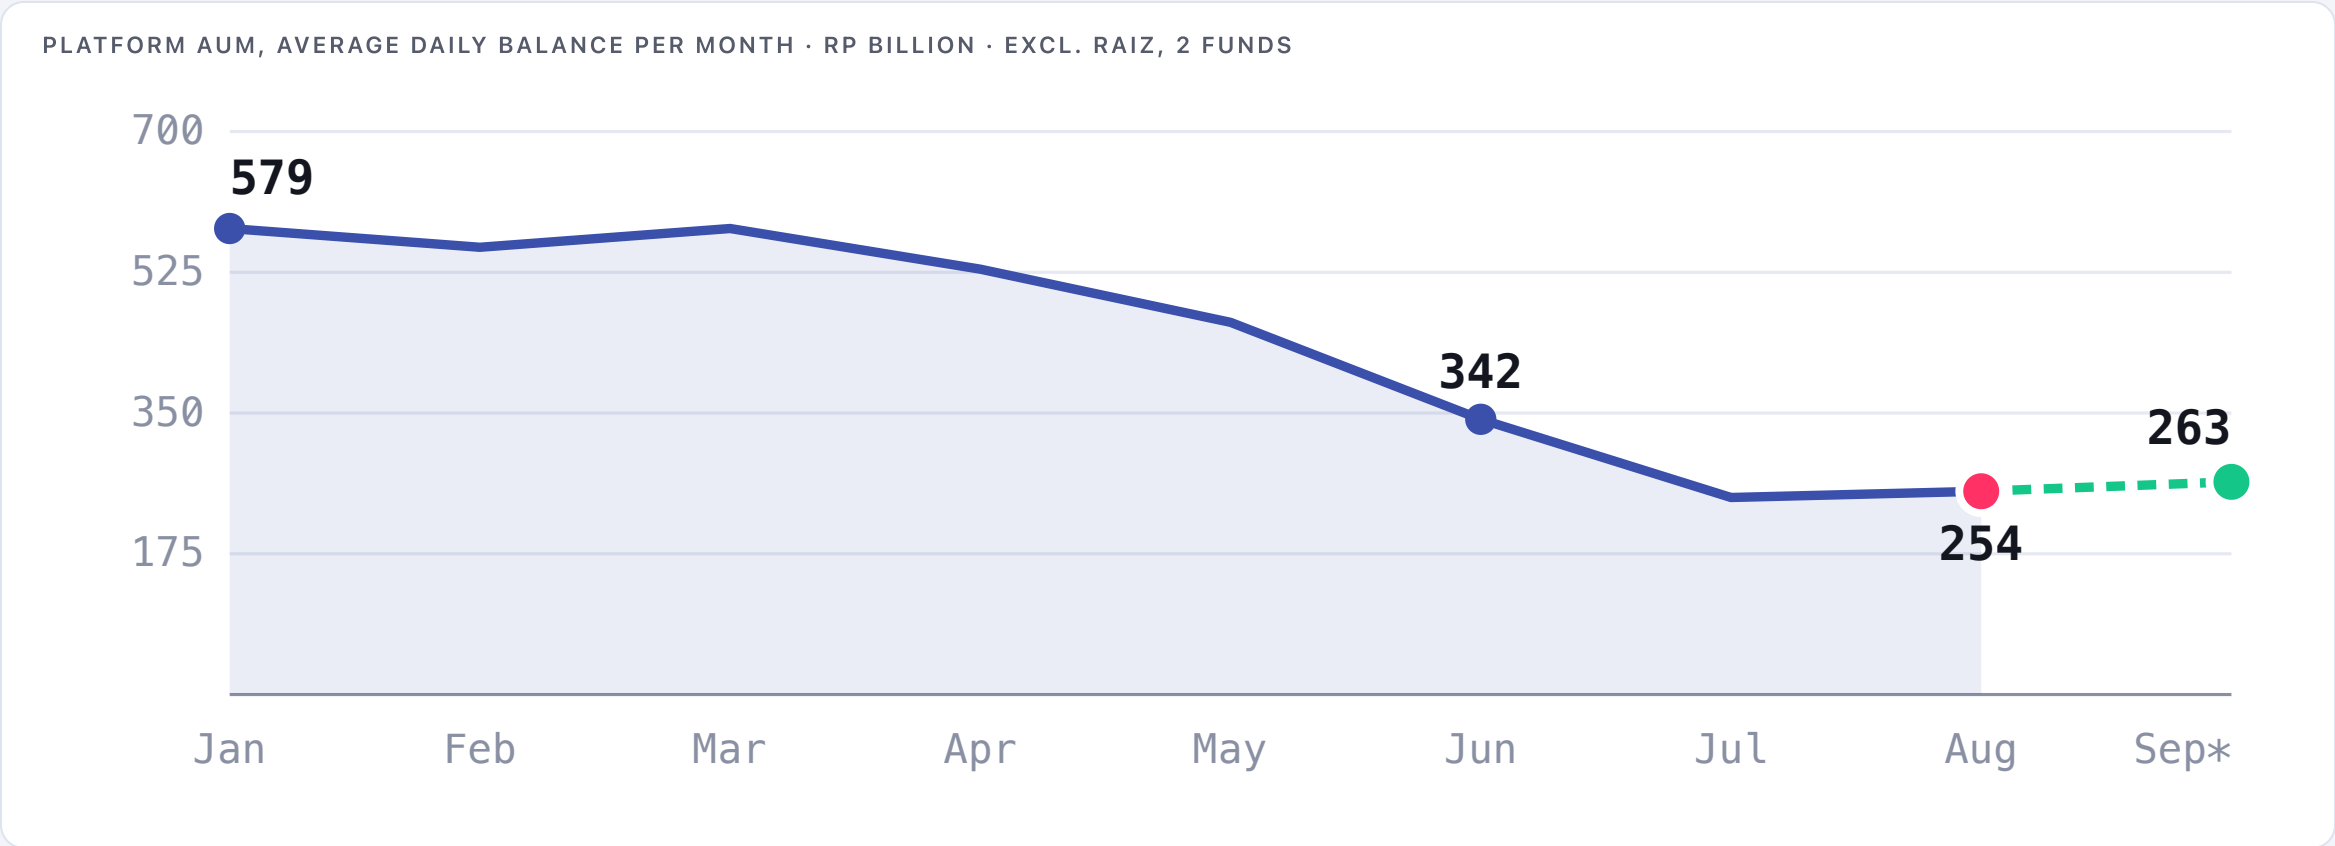

September is 14 of 30 days. Pace naively scales the 14-day flow total up to a full month, balances and people counts are never projected. AUM below is daily-average, which already makes a partial month comparable, so its pace column repeats the partial-month figure rather than scaling it.

METRIC	JULY	AUGUST	SEP · 14D	SEP PACE
AUM, daily avg	246.1 B	253.7 B	263.4 B	263.4 B
AperD fee revenue	147.2 M	156.5 M	69.5 M	148.9 M
Net flow	-55.0 B	+48.3 B	-2.5 B	-5.4 B
Buy volume	84.5 B	69.0 B	5.0 B	10.7 B
Sell volume	139.5 B	20.7 B	7.5 B	16.1 B
Median buy ticket	1.0 M	0.5 M	1.0 M	—
Active investors, rolling 30d (completed buys only)	305	290	321	—
Registrations	125	100	67	144
Signups via referral	4	20	30	—

THE NUMBER NOBODY WILL SPOT ON THEIR OWN

Last month's big-cheque story is **unwinding**, not building: the average buy ticket fell from Rp 120.9 M in July to Rp 100.2 M in August to Rp 14.3 M across September's first fourteen days. The median, which had halved twice into July, actually **recovered** to Rp 1.0 M this month. August's positive flow came from ordinary-sized buying spread across 290 investors, not a handful of large tickets.

AUM down 56% in eight months, then two flat-to-up

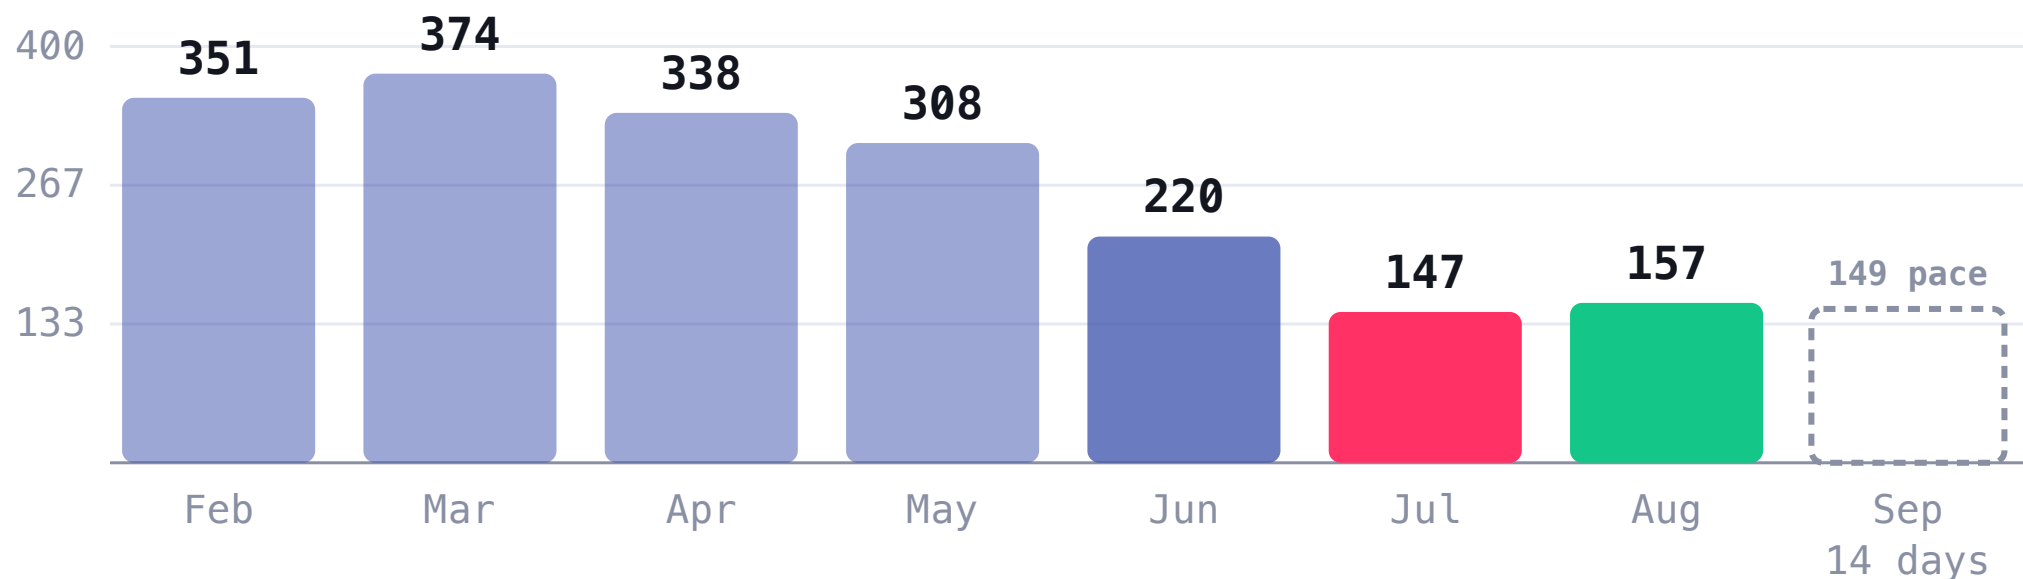

Same recut as last month: **average daily balance**, not month-end snapshot. August closed at Rp 253.7 B (+3.1%) and September's first 14 days (*) are running higher still, Rp 263.4 B, the first sustained flat-to-up stretch since the decline began. Feed starts 14 January 2026, still no year-on-year comparison until 2027.

Why: the decline is **episodic, not gradual**. Daily balances show a series of large single-account redemptions, not broad selling. The biggest on its own: one account fully redeemed **Rp 125.9 B in a single day** (28-29 Jan). Similar step-drops recur through the year (Apr 7-8: -65 B, Jun 19-20: -69 B, Jul 3-4: -35 B), the same one-or-two-account dynamic already documented for July specifically, just recurring earlier too.

Revenue turned up with AUM

PLATFORM FEE REVENUE, APERD SHARE · RP MILLION PER MONTH · EXCL. RAIZ, 2 FUNDS

Fees accrue daily off the balance, so a month that ends higher earns more the whole way through. August is **+6.3% against July** — the first month-over-month increase since March — though still **–58% against the March peak** (Rp 374 M). September's dashed bar is a 14-day run-rate, projecting to **~Rp 149 M**, a plateau — despite AUM average being *up* 3.8% in September. Confirmed cause: each fund's own fee rate hasn't moved, but the **mix** has — Sucorinvest Sharia Balanced (0.75%/yr AperD rate) fell from a Rp 77.5 B August average back to Rp 32.4 B, while Core Invest Monev Market (2.50%/yr AperD rate) rose from Rp 17.0 B to Rp 72.0 B. That's lifted up all the platform's AUM-weighted AperD

No repeat of July's whale event — this time it's broad

July's Rp 50.0 B swing came from two accounts moving Rp 59.5 B between them. August's **+Rp 1.5 B** swing came from nowhere in particular — the single biggest move all month was **Rp 3.0 B**, two orders of magnitude smaller.

ACCOUNT	31 JUL	31 AUG	CHANGE	REGISTERED
Largest single mover*	5.0 B	2.0 B	-3.0 B	Jan 2026
One of July's two redemptions†	21.2 B	21.9 B	+0.7 B	Mar 2023
Everyone else — ~5,151 accounts	236.1 B	239.9 B	+3.8 B	—

* Largest single AUM move in either direction across all of August, Rp 5.0 B → Rp 2.0 B. † Added capital back in August instead of continuing to redeem.

August's turnaround was **broad participation**, not one account reversing course: Rp 69.0 B in buys across 689 orders from 290 different investors, against redemptions of just Rp 20.7 B — a fraction of June and July's sell-off.

Concentration deepened anyway

TOP 2 ACCOUNTS, TODAY

27.7%

of all AUM

TOP 10, TODAY

52.7%

of all AUM

TOP 100, TODAY

84.9%

of all AUM

TOP-10 SHARE VS JULY

+10.0 pp

42.7% → 52.7%, with no whale event this month

THE OTHER END OF THE BOOK

5,152 accounts hold any AUM at all. **3,806 of them hold under Rp 100,000**, and the median is Rp 12,984. The working customer base is roughly **1,346 accounts** above that floor.

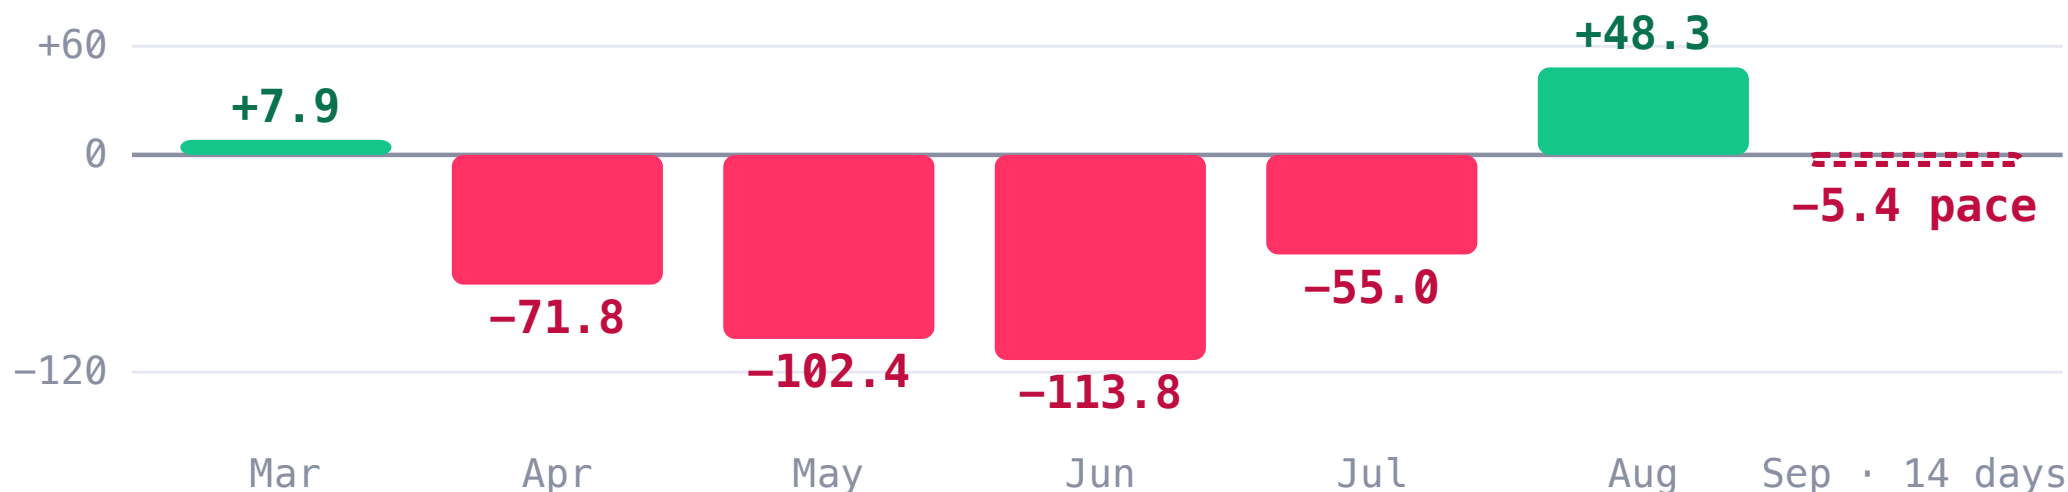

WHAT THIS MEANS FOR THE ROADMAP

July's two-account shock wasn't the disease, just the most visible symptom. With no single trigger this time, the book still concentrated **further** at the top-10 level — organic growth among large accounts, not distress.

Still no UTM/channel field, and July's HNWI-support ask for accounts over Rp 1 B has not visibly shipped. Both stand exactly where they stood last meeting.

August broke the losing streak — September hasn't confirmed it

NET FLOW — BUYS MINUS SELLS · RP BILLION · EXCL. RAIZ

August was the best net-flow month since March, and the first fully positive month in five. Early September has already slipped back to **-2.5 B in 14 days** (pace -5.4 B), not enough data yet to call a reversal, but flagging it now rather than after next month's numbers land.

Eight months of decline — but conversion is improving

REGISTERED THAT MONTH, CURRENTLY VERIFIED, AND HOW MANY BOUGHT WITHIN 30 DAYS OF REGISTERING

MONTH	REGISTERED	VERIFIED (CURRENT STATUS)	BOUGHT WITHIN 30D
Jan 2026	471	188	83
Feb 2026	236	93	32
Mar 2026	262	106	27
Apr 2026	217	75	18
May 2026	148	60	15
Jun 2026	138	53	18
Jul 2026	125	45	15
Aug 2026	100	55	21

AUGUST FUNNEL

100 → 55 → 21

Of August's own 100 registrants: 55% verified, 21% bought within 30 days — both better than July despite fewer people in the door. Lowest registration month on record; late-August's 30-day window hasn't fully closed yet.

GA EVENT REACH, AUG UNINSTALL TRACE

162 first_open • 209 sessions

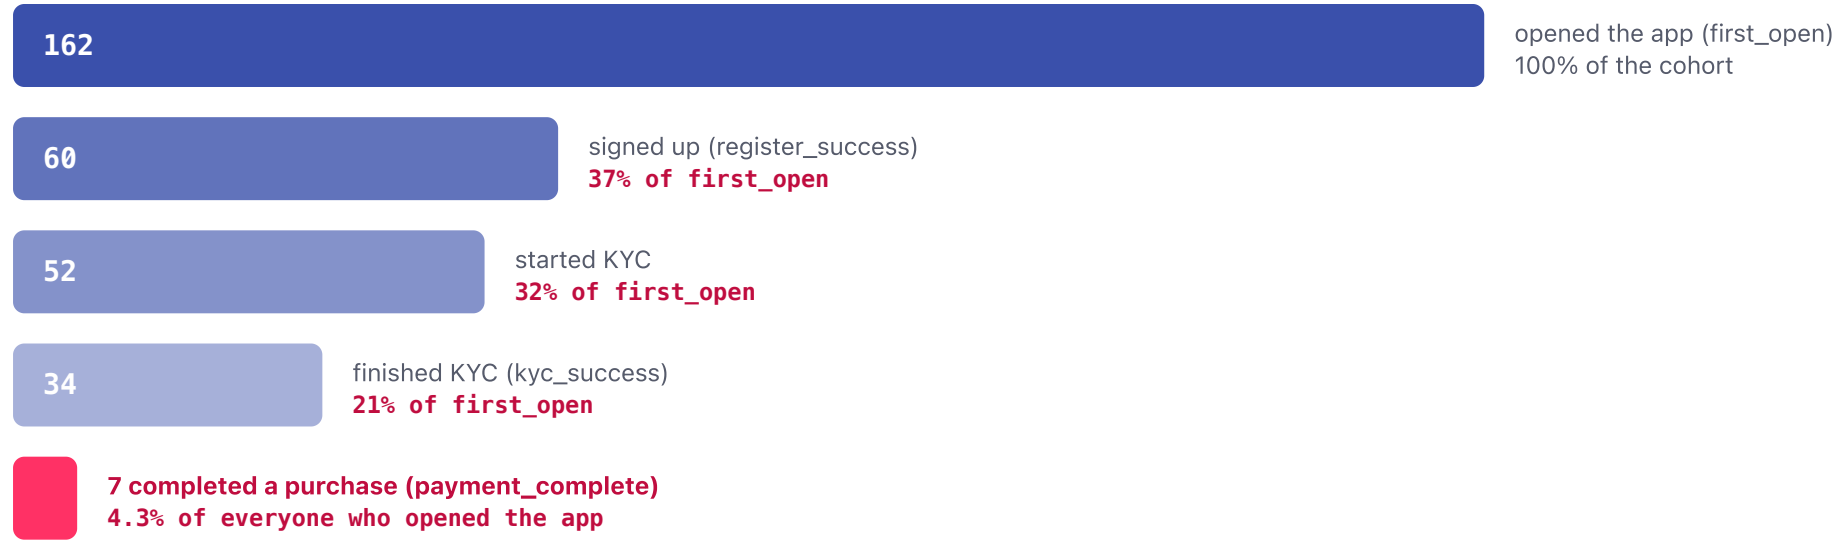

This month's GA cut is an event trace for the uninstall cohort, not July's Play Store download/uninstall count — a different pull, treat as directional only.

WE ARE STILL BLIND ON CHANNEL

No UTM or channel field exists on the user record. Not one registration can be attributed to a channel, spend change, or campaign — unchanged from last month's ask.

Before they uninstalled: how far this cohort got

DISTINCT USERS WHO EVER FIRED EACH EVENT · GOOGLE ANALYTICS, AUG 2026 UNINSTALL COHORT

PUSH DIDN'T HOLD THEM EITHER

Of the 138 people who received a notification, **78% dismissed at least one** and **20% ever clicked one**. In-app messages barely reached this cohort at all — only 7 people ever saw one, too small a sample to read into.

A PROMO DIDN'T SAVE THE SALE

Up to **12 people** clicked into a promo screen at some point and still ended up in this cohort — same finding as July, a promo click alone isn't a retention signal.

SOME LEFT ON PURPOSE

12 people logged out manually and **1 cleared the app's local data** before disappearing — a deliberate exit for at least this small group, same pattern as July.

Cohort is the August uninstall population traced in GA. This month's export is marginal per-event distinct-user totals, not a per-user ordered trace like July's — so the step rates above read as "at least X people reached Y," not a strict sequential funnel (a person could finish KYC without a recorded register_success, for example). GA still doesn't join to registration/KYC/buy in the warehouse, so these remain correlated events, not a proven causal order.

The referral program's first 15 days

Scoped to the program's actual launch — 31 Aug through 14 Sep — nothing from before counted.

31 AUG – 14 SEP	REGISTERED	ACTIVATED	RATE	MEDIAN INVESTED
Via referral	32	14	43.8%	Rp 1.0 M
Organic	41	3	7.3%	Rp 0.23 M

43.8%

of all registrations since launch came via referral — 32 of 73

6.0x / 4.3x

more likely to activate, more invested at the median than organic — same 15 days

Early and small — 73 people, 15 days. Strong enough to take seriously, too little to call a trend yet. See the next slide before crediting it as a scalable channel.

2 of 9 referrers account for over half of it

DISTINCT REFERRERS, 15 DAYS

9

for 32 referred signups

TOP REFERRER ALONE

34.4%

11 of the 32 — one person

TOP 2 REFERRERS

53.1%

17 of the 32

REFERRER	REFERRED	FIRST	MOST RECENT
Top referrer	11	31 Aug	9 Sep
#2 referrer*	6	4 Sep	10 Sep
Everyone else — 7 referrers	15	—	—

* This account is already on this dashboard's own automated e-statement recipient list — worth confirming whether it's a customer or an internal/test account before counting it as organic referral.

CAUSE, CONFIRMED

Confirmed with Marketing: the "Bonus Program MGM SayaKaya" (Member Get Member) campaign, starting 1 Sep, is this referral push. Reward amounts still read 0 in the system, a tracking gap, not a sign the bonus isn't running.

BEFORE CALLING THIS A CHANNEL

73 people, 15 days, 2 referrers driving over half. Confirm both accounts are genuine customers, then watch whether October broadens past these two before crediting referral as a scalable channel.

Retention kept getting worse while flow got better

REGISTERED USERS

62,994

EVER TRANSACTED

Jun 2026	24	33%	8%	4%	—
Jul 2026	16	31%	19%	—	—
Aug 2026	18	28%	—	—	—
Sep 2026	27	—	—	—	—

STILL TWO THINGS WRONG AT ONCE

Cohorts are still **shrinking**: 89 new buyers in January became 18 in August. M+1 retention is sliding too, from a peak of 47% for May's cohort down every month since: 33% in June, 31% in July, 28% in August.

DORMANCY GOT WORSE, NOT BETTER

74.9% dormant over a year in July, **81.5%** now. August's positive net flow ran on new and existing active money, it didn't reactivate anyone.

WHY? A HYPOTHESIS, NOT CONFIRMED

Recent cohorts are small (16-24 people), so a couple of accounts move the percentage several points. Two partial, testable factors: the slide overlaps the platform's own 8-month AUM decline (joining mid-slump may discourage adding more), and promo-code first-buyers repeat-buy less all year (29% vs 36% organic) while their share of new cohorts rose from 2% in March to 32-38% in May-June. Neither fully explains it alone.

Same cohorts, a money lens: who's still net-positive

The previous slide tracks **whether someone bought again**. This one tracks **money in vs. out** (excl. RAIZ): the % is cumulative (net buy-minus-sell ≥ 0 since first purchase), the Rupiah line is **not**, it's what that stretch alone added or pulled out. M0 = the cohort's first month; M+6 folds in M+4 and M+5 too, so no month goes missing.

FIRST-BUY COHORT	SIZE	M0	M+1	M+2	M+3	M+6
Jan 2026	89	83% +Rp 204.7 B	85% -Rp 62.5 B	81% -Rp 23.6 B	78% -Rp 22.0 B	70% -Rp 125.1 B
Feb 2026	39	100% +Rp 10.0 B	97% -Rp 1.3 B	97% +Rp 1.6 B	97% -Rp 354.3 M	87% -Rp 12.2 B
Mar 2026	42	95% +Rp 54.3 B	86% -Rp 29.0 B	81% -Rp 24.9 B	71% -Rp 99.6 M	76% +Rp 482.4 M
Apr 2026	25	96% +Rp 413.4 M	88% +Rp 11.2 M	88% -Rp 308.7 M	84% +Rp 99.1 M	—
May 2026	19	95% +Rp 896.7 M	79% -Rp 716.8 M	79% +Rp 5.5 M	74% +Rp 3.7 M	—
Jun 2026	24	96% +Rp 21.7 M	79% +Rp 20.6 M	75% +Rp 1.0 M	75% -Rp 1.8 M	—
Jul 2026	16	81% +Rp 71.9 M	63% +Rp 82.6 M	63% +Rp 16.5 M	—	—
Aug 2026	18	72% +Rp 137.1 M	33% -Rp 35.0 M	—	—	—
Sep 2026	27	89% +Rp 731.1 M	—	—	—	—

BUYING AGAIN ≠ STAYING INVESTED
February's cohort re-bought only 41% of the time by M+1 on the previous slide, but 97% are still cumulatively net-positive here. Most cohorts hold 70-97% net-positive well past M+1.

JANUARY'S RUPIAH SWINGS ARE 6 ACCOUNTS, NOT 89
+Rp 204.7 B in January's own first month, then net-redeemed every stretch since (-Rp 233.2 B combined). 6 of 89 accounts drive nearly all of it, one alone moved +Rp 50 B. Read the percentages, not the Rupiah swings, as representative.

WHY JANUARY'S % IS LOWER: FUND CHOICE, NOT JUST WHALES
51 of January's 89 (57%) chose a Sucor Asset Management fund first, retained at 61% by M+6 vs. 82% for everyone else in the same cohort, a real person-level gap. Sucor promos ran that month, but none show up on their actual transactions, likely the same promo-tracking gap flagged elsewhere in this deck.

The fee-rate point is starting to move on its own

FUND	MI	JUL	AUG	FEE	AUG APERD
Sucorinvest Sharia Balanced	Sucor	48.7 B	77.5 B	1.50%	49.4 M
Sucorinvest Sharia Money Market	Sucor	19.5 B	19.3 B	1.00%	8.2 M
Sucorinvest Money Market	Sucor	24.3 B	17.2 B	1.00%	7.3 M
Pinnacle Money Market	Pinnacle	12.9 B	15.4 B	0.55%	3.6 M
Trimegah Kapital Plus	Trimegah	2.1 B	7.3 B	4.00%	12.4 M

Trimegah Kapital Plus earns **Rp 12.4 M** on Rp 7.3 B, more than Sucorinvest Money Market's Rp 7.3 M on double the AUM. We flagged this rotation last month, and it's now confirmed: one account switched **Rp 7.0 B** into this fund in July (a fund SWITCH_IN, not a buy), not new money or broad demand.

CONCENTRATION RISK, STILL

Sucor Asset Management is now **eight of our top twelve funds**, up from five in July.

NOT AS CLEAN AS IT LOOKED

Trimegah's jump is one account's fund switch, the same single-account pattern behind July's headline whale event, just smaller and easy to miss since a switch never shows up as a platform outflow.

The same eight numbers, one month later

Same eight as last meeting, August's values beside them, RAIZ excluded from all of them. Two are still blocked — and one got harder, not easier.

01 · AVAILABLE

Net flow

Buys minus sells. August: +48.3 B.

02 · AVAILABLE

AperD fee revenue

What we earn, not what we hold.
August: 156.5 M.

03 · AVAILABLE

Active investors (30d, completed buys)

Today: 321. Never quote the full book.

04 · AVAILABLE

Top-100 concentration

Today: 84.9%, up from 80.7%.
Our real risk register.

05 · AVAILABLE

Registration → first buy

Within 30 days. August: 21%, up from 12%.

06 · AVAILABLE

M+1 repeat-buy rate

August cohort: 28%, down from 33%.

07 · NEEDS UTM

Registrations by channel

Still blocked on Marketing OKR 2.1 — unchanged since July.

08 · WORSE, NOT FIXED

Campaign net

used_quota still reads 0, and now bonus_amount is missing on 5 of 6 August campaigns too.

August in one place, and what needs attention next

THE MONTH IN NUMBERS

MONEY

AUM, daily avg	253.7 B +3.1%
AperD revenue	156.5 M +6.3%
Net flow	+48.3 B

Best month since March on all three. September's first 14 days: AUM 263.4 B (+3.8%), but net flow already -2.5 B (pace -5.4 B), too early to call a trend.

CONCENTRATION

Top 10 accounts	52.7% of all AUM
Top 100 accounts	84.9% of all AUM

Up from 42.7% (top 10) in July, +10.0pp with no single whale event this time, organic growth among large accounts. Median holding: Rp 12,984.

ACQUISITION

Registrations	100, record low
Aug funnel	55% verified · 21% bought in 30d

Registrations have fallen every month since January (471 → 100), but August's own conversion is the best yet, both rates beat July despite fewer people in the door.

REFERRAL (15 DAYS OLD)

Share of registrations	43.8% 32 of 73
vs. organic	6.0× activate · 4.3× invested

Promising, but 2 of 9 referrers already account for 53.1% of it, too early to credit as a scalable channel.

RETENTION & MIX

M+1 repeat-buy, Aug cohort	28%, down from 33%
Sucor AM funds in top 12	8, up from 5 in July

Buying-again is sliding, but most cohorts still hold 70-97% cumulatively net-positive on money in vs. out, they're just not repurchasing.

ACTION ITEMS

- No UTM/channel field**, zero registrations attributable to channel or spend. Blocked on Marketing OKR 2.1, 3rd month unresolved.
- Campaign data gap widened**: used_quota still reads 0 on every campaign, and bonus_amount is now missing on 5 of 6 August campaigns too, cost can't be reconstructed at all.
- GA doesn't join** to registration/KYC/buy in the warehouse, uninstall funnels read as correlated events, not a proven sequence.
- Confirm the **#2 referrer** (6 signups) is a real customer, not the internal/test account on this dashboard's own e-statement list.
- "Bonus Program MGM SayaKaya"** confirmed as this referral push (Marketing). Reward amounts still read 0 in the system, a tracking gap to fix, not an open question.
- HNWI-support workflow** for accounts over Rp 1 B, asked last meeting, still hasn't shipped.
- Watch whether **referral broadens past its top 2 referrers** in October before calling it a scalable channel.
