AI TASKFORCE · UPDATE

How AI supports the Sayakaya business and its team

What we built with the AI assistant since September, shown in the live dashboard.
Figures are hidden on purpose.

SUMMARY

AI turned the analytics team into a service the whole company can use every day

Everyone works from one place

Sales, marketing, operations, customer service and management all use the same dashboard, each with their own login and only the sections they need.

Questions answered in minutes

Campaign, booth, promo and funnel questions that needed a manual report now have a ready screen, refreshed from live data.

Problems found earlier

Early-warning checks flag unusual movements, lapsed investors and data issues before month end.

Controlled and traceable

Every login, export and report sent is recorded, and access is granted per section.

WHO USES IT

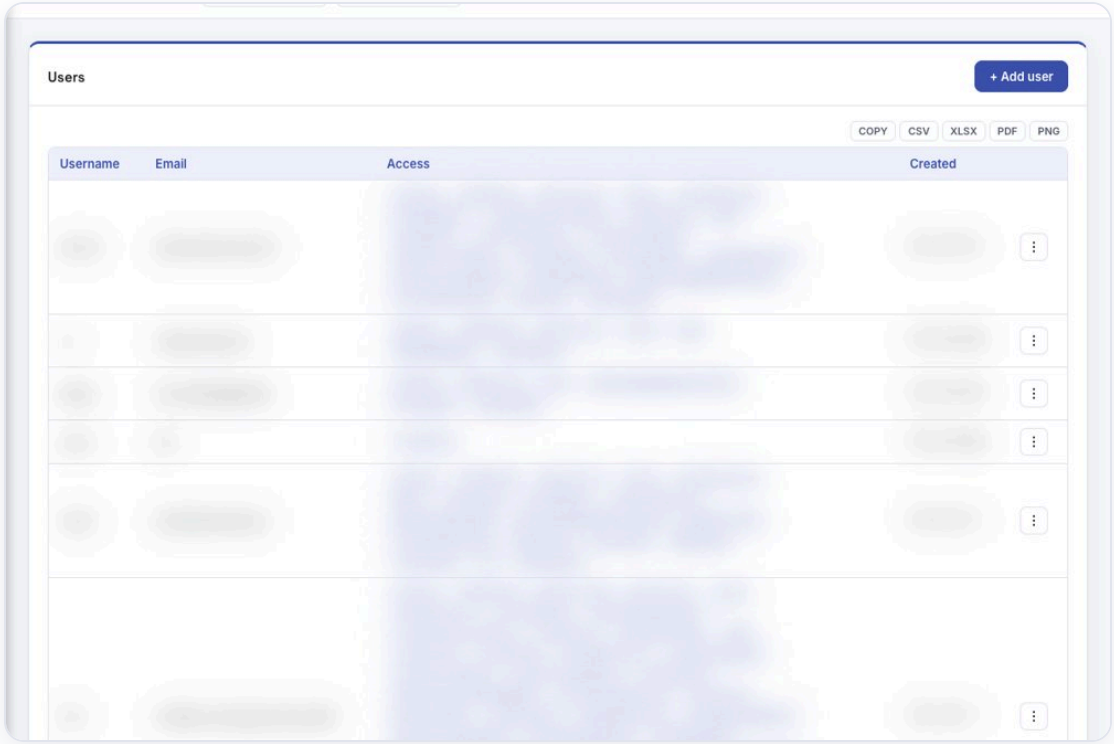

Eleven Sayakaya logins work in the dashboard, from operations to campaigns to management

TEAM	LOGINS	SECTIONS THEY USE
Analytics owner	kukuh	Full access. Builds and reviews every feature, manages access, sends scheduled reports.
Executives (CEO and CPO)	maureen, ramano	Near-full access: growth, revenue, funnel, booth and promo views, Ask, monthly review, presentation. Maureen also has AI Insights.
Operations and reconciliation	audrey, robby, tiur	Portfolio fix, reconciliation, revenue, partner revenue, booth and referral views.
Marketing and sales campaigns	hardy, gilang	Booth events, promo recap, referral, push, bonus lists. Hardy also has Ask.
Customer service	cs	Overview, growth, investor lists and explorer. Most frequent logins.
Product manager	imel	Explores the product: funnel, user behaviour, subscription, onboarding, engagement, Ask, SQL explorer.
Viewer	guest	Presentation tab only, for decks like this one.

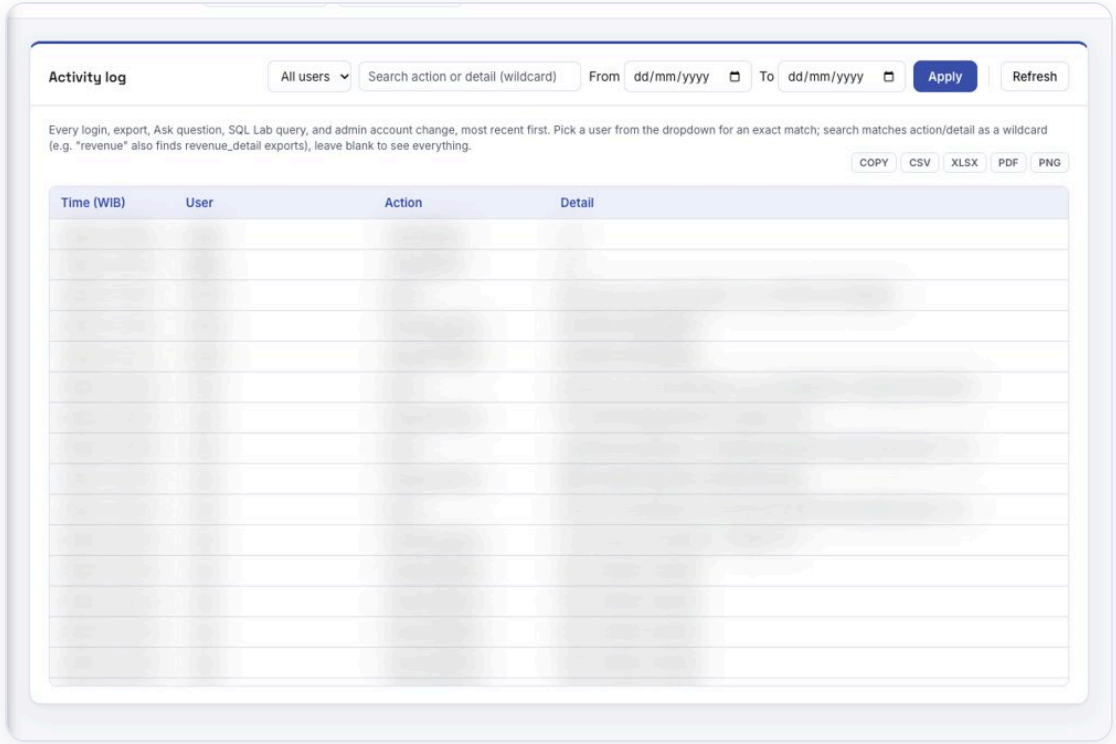

Executive and product-manager roles confirmed by the analytics owner. Other team labels are inferred from each login's access list. No usage counts shown.

ONE PLATFORM, SAFE ACCESS

Each colleague gets only the sections they need, and every action leaves a trail

Manage users: each login has a per-section access list. Names and emails are blurred.

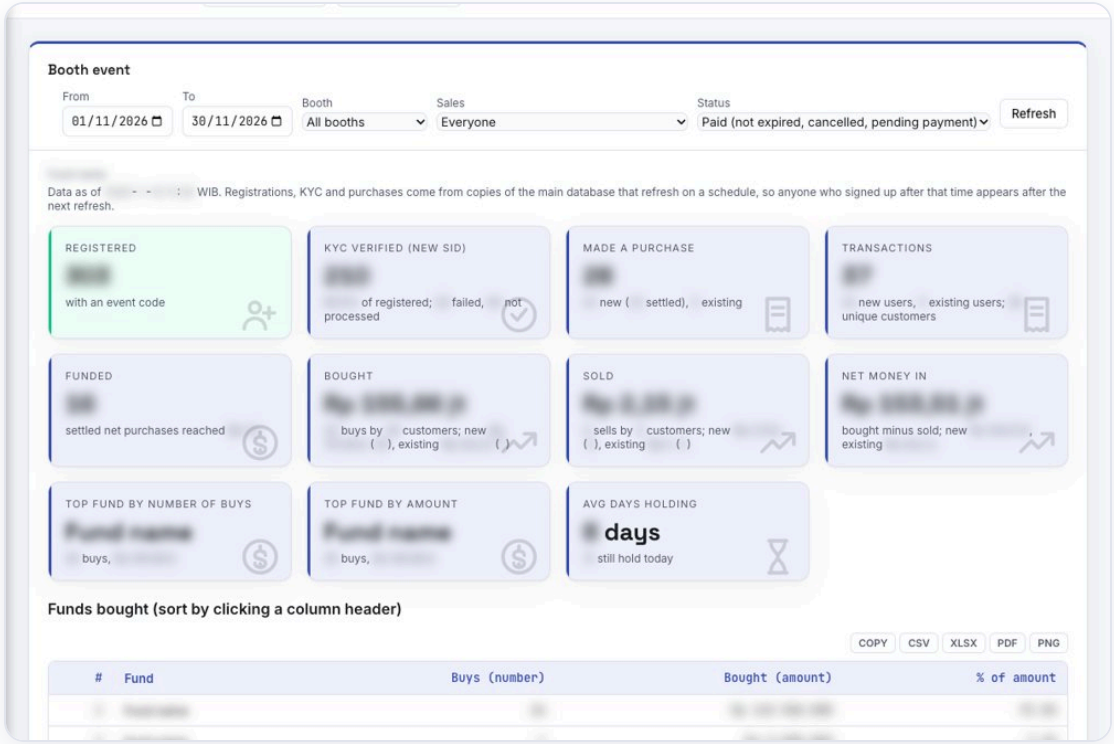

Activity log: who logged in, exported or opened a sensitive view. Rows are blurred.

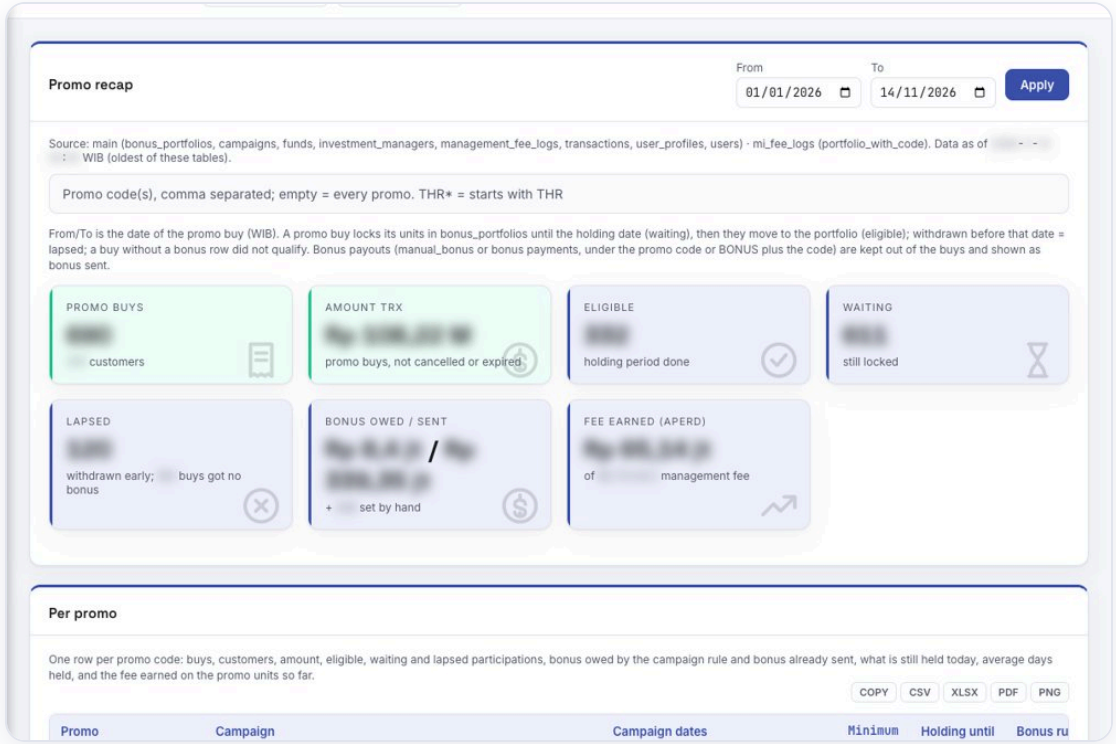

Used by: kukuh administers access (administrators only). Everyone else works inside their own permissions.

GROWTH

Marketing and sales can see what each booth and promo actually delivered

Booth event: sign-ups to first top-up by booth and sales person, with the top funds bought.

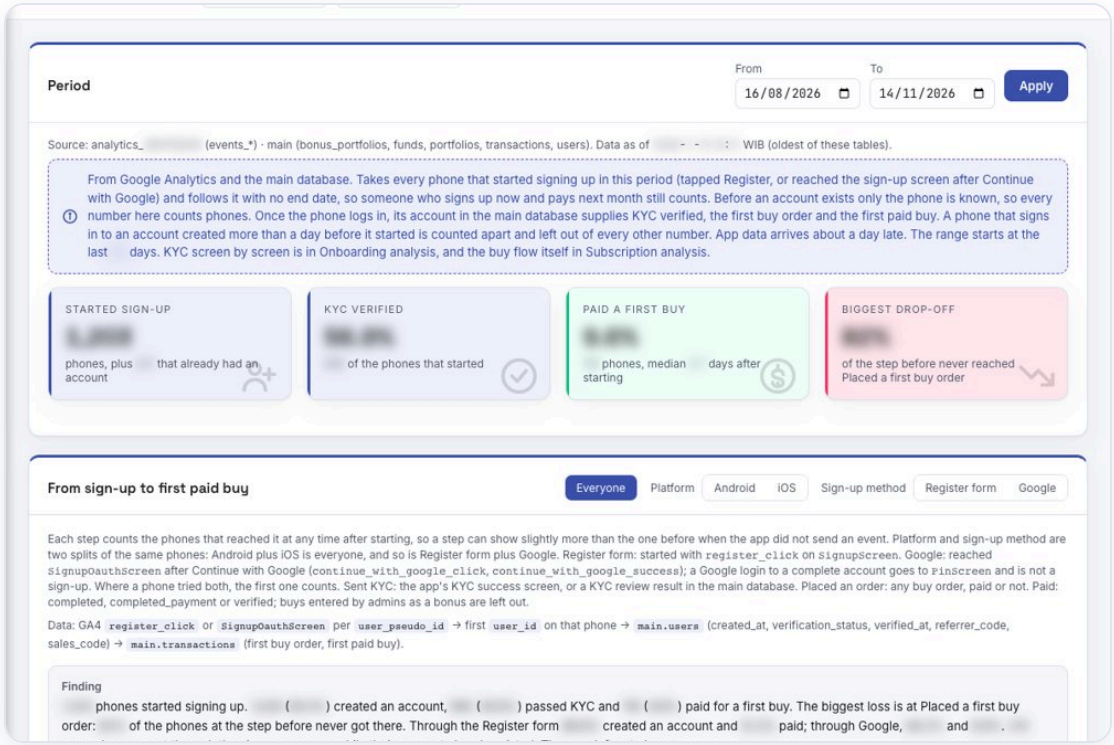

Promo recap: who bought with a promo code, who qualifies, bonus owed vs sent, fees earned.

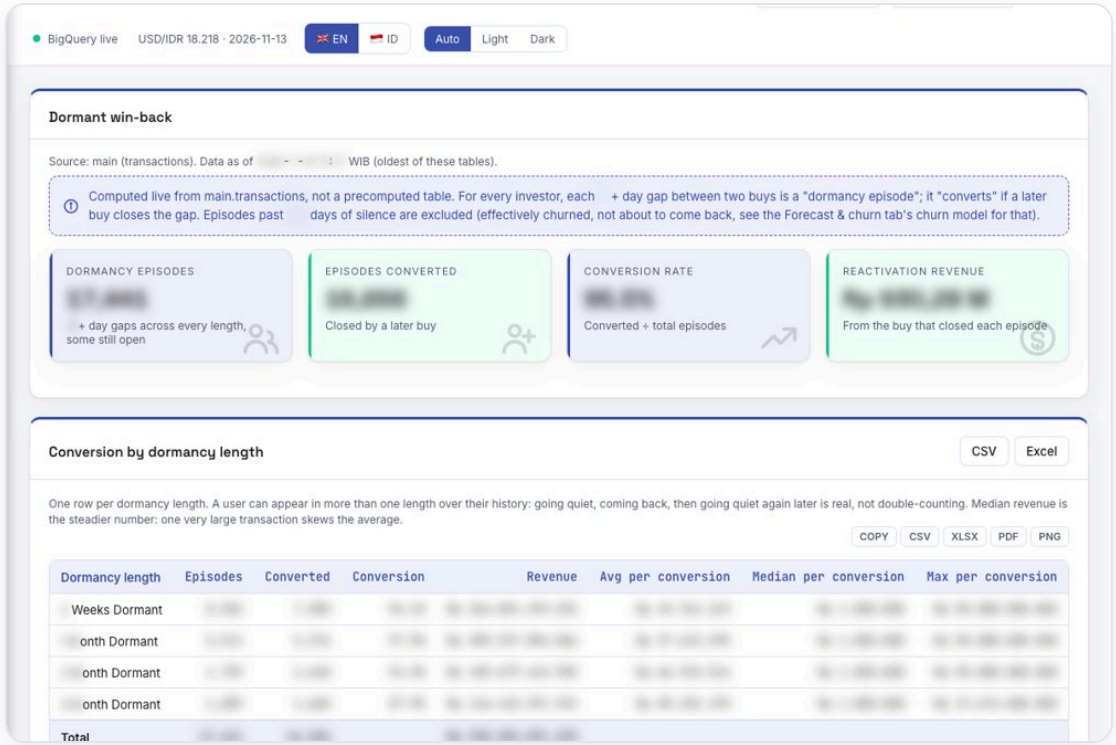

Used by: Booth: audrey, hardy, ramano, maureen. Promo recap: hardy, gilang, ramano, maureen (access list).

RETENTION

The team can see where new users drop out and which lapsed investors to win back

Sign-up funnel: from sign-up to first paid purchase, by phone platform, with the biggest drop-off highlighted.

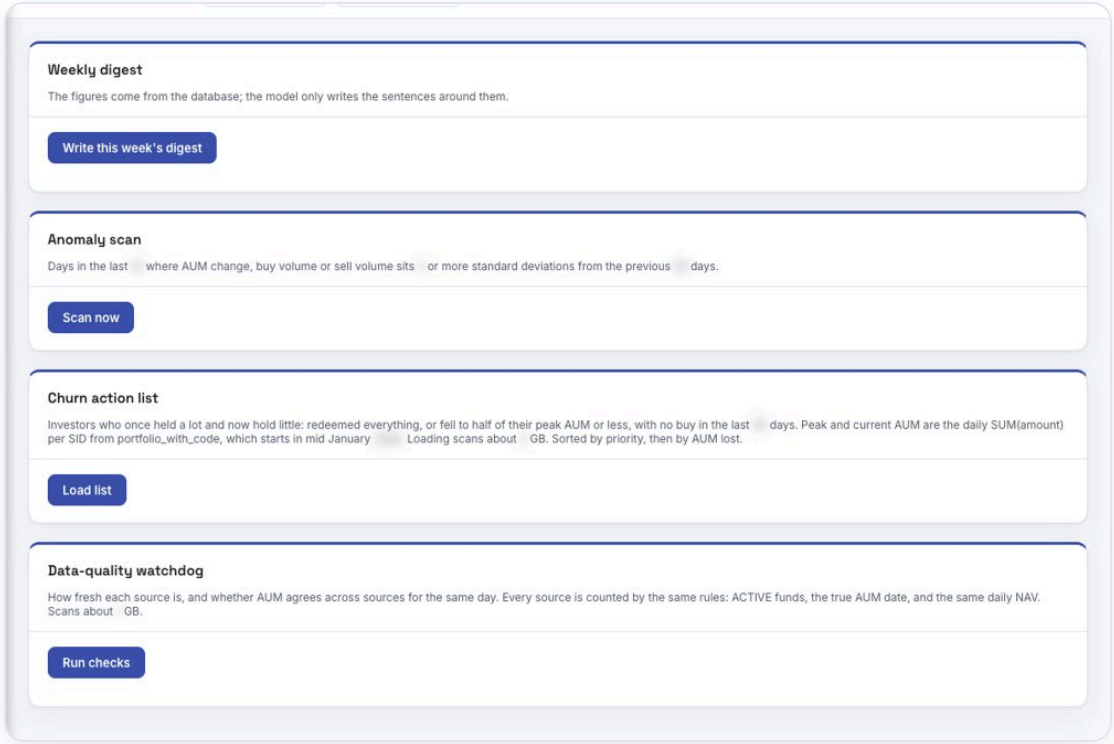

Dormant win-back: how long investors were inactive and how many came back.

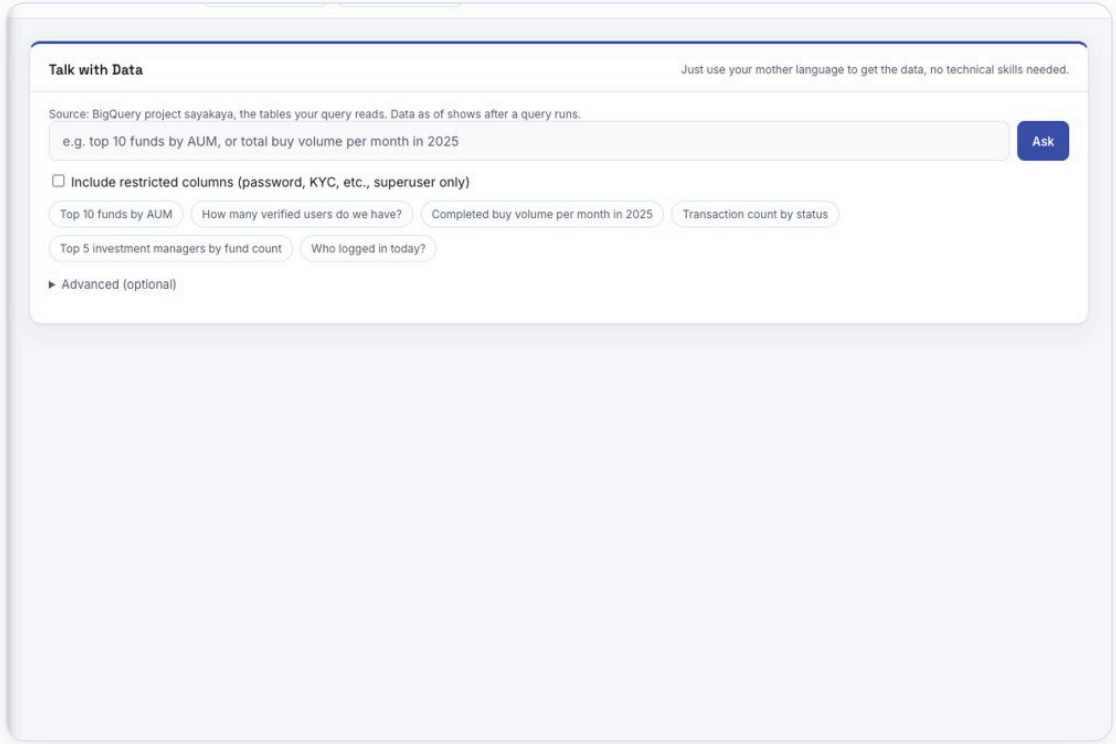

Used by: Funnel and win-back: imel, ramano, maureen (access list).

DECISION SUPPORT

Anyone can ask a business question in plain words and get an early warning without waiting for an analyst

AI Insights: weekly digest, unusual-movement scan, churn action list and data-quality checks, one click each.

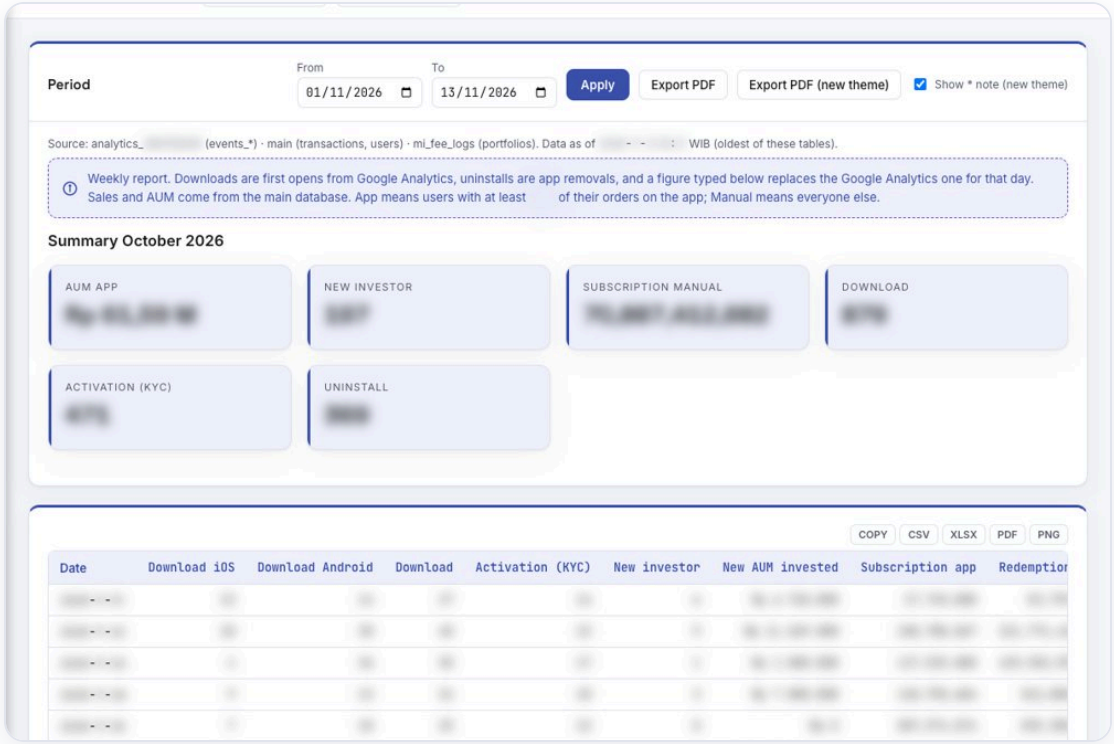

Ask: type a question in everyday language, get a table and the source. Restricted columns stay hidden by default.

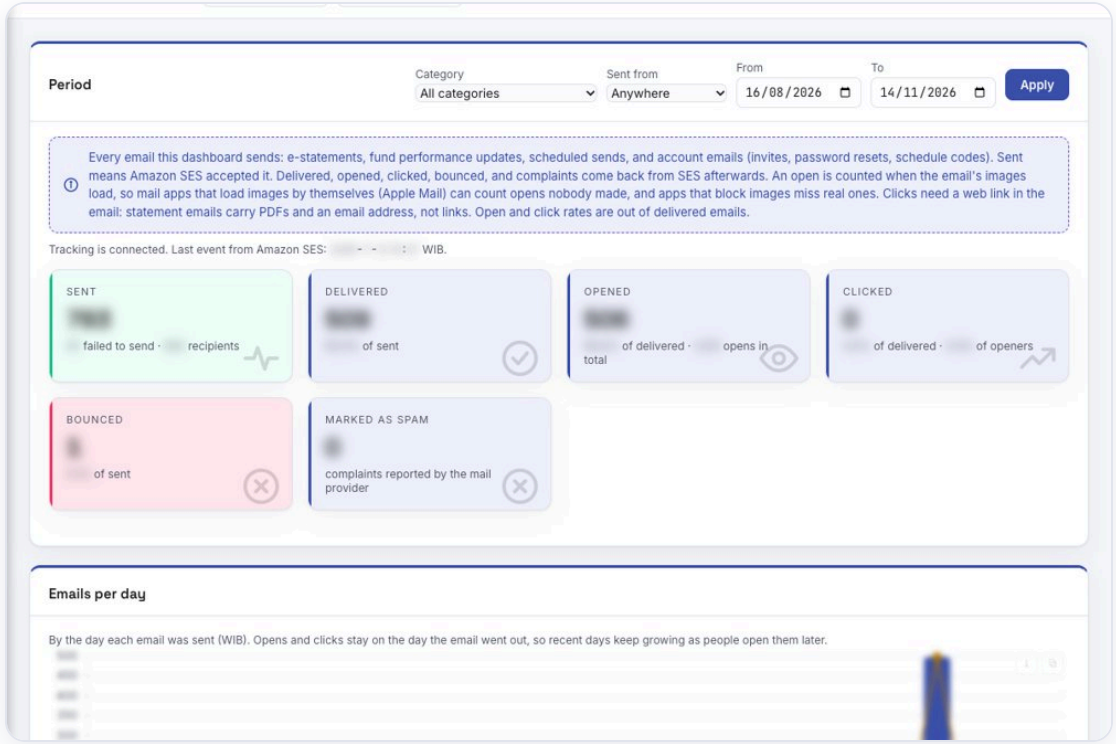

Used by: AI Insights: maureen, kukuh. Ask: hardy, imel, ramano, maureen, kukuh (access list).

REPORTING

Monthly management reporting and email delivery tracking run from live data

Management report: monthly summary and daily table, exportable to PDF.

Email recap: sent, delivered, opened and bounced for reports and statements sent to investors.

Used by: Management report: kukuh, maureen. Email recap: imel, ramano, maureen (access list).

BEHIND THE SCENES

Cost and quality controls keep the platform affordable and dependable

Lower running cost

Heavy data queries were reorganised so each screen reads far less data. Further cloud savings are identified and waiting for a decision.

Checked before release

Automated tests run before every update, and risky changes were analysed and stopped early.

Freshness you can see

Each report shows its data date, so nobody mistakes yesterday's numbers for live ones.

Known limits

Daily refresh runs on one Mac, so a day is skipped if it is off. Time saved was not tracked, so impact is described, not counted.

NEXT

Next: make adoption deeper, the refresh more reliable, and the results measurable

NOW

- Confirm roles with each user
- Train the team on Ask and AI Insights

NEXT

- Move the daily refresh off a personal Mac
- Record time saved per team

DECISION (PROPOSAL)

- Approve cloud savings
- Name a backup owner for the dashboard
