

# SayaKaya September Review

August 2026 performance, with July for comparison. Data through 10 September.

## READ THIS BEFORE THE FIRST NUMBER

The **RAIZ user segment** is excluded from every figure in this deck — accounts with a RAIZ or RAIZKAYA referrer code, a large, mostly dormant set with minimal AUM and activity. Every AUM/holdings figure also excludes two funds — **Avrist Liquid Fund** and **Avrist Indeks LQ45** — a new rule this month. Numbers here will be lower than the dashboard, which still counts the full book.

# The month in six numbers

AUM · AUG DAILY AVG

**253.7 B**

+3.1% vs Jul avg

PLATFORM FEE (APERD)

**156.5 M**

+6.3% vs Jul — 1st rise since Mar

NET FLOW

**+48.3 B**

best month since March

NEW REGISTRATIONS

**100**

down again, fewest since tracking began

ACTIVE INVESTORS (30D, COMPLETED BUYS)

**310**

of 7,094 who ever bought

AUM · SEP DAILY AVG (9D)

**263.8 B**

+4.0% vs Aug avg

August is the first month where AUM, revenue, and net flow all moved the **same direction** since the decline began — AUM +3.1%, revenue +6.3%, net flow **+48.3 B**, the best since March. But September's first 9 days have already slipped back to **−3.0 B** net — too early to call a trend, worth watching next month.

# July → August → September

September is 9 of 30 days. Pace naively scales the 9-day flow total up to a full month — balances and people counts are never projected. AUM below is daily-average, which already makes a partial month comparable.

| METRIC                                              | JULY    | AUGUST  | SEP · 9D | SEP PACE |
|-----------------------------------------------------|---------|---------|----------|----------|
| AUM, daily avg                                      | 246.1 B | 253.7 B | 263.8 B  | —        |
| AperD fee revenue                                   | 147.2 M | 156.5 M | 45.3 M   | 151.0 M  |
| Net flow                                            | -55.0 B | +48.3 B | -3.0 B   | -10.0 B  |
| Buy volume                                          | 84.5 B  | 69.0 B  | 1.9 B    | 6.3 B    |
| Sell volume                                         | 139.5 B | 20.7 B  | 4.9 B    | 16.4 B   |
| Median buy ticket                                   | 1.0 M   | 0.5 M   | 1.0 M    | —        |
| Active investors, rolling 30d (completed buys only) | 304     | 290     | 310      | —        |
| Registrations                                       | 125     | 100     | 52       | 173      |
| Signups via referral                                | 4       | 20      | 27       | —        |

THE NUMBER NOBODY WILL SPOT ON THEIR OWN

Last month's big-cheque story is **unwinding**, not building — the average buy ticket fell from Rp 120.9 M in July to Rp 100.2 M in August to just Rp 7.8 M in September's first nine days. The median, which had halved twice into July, actually **recovered** to Rp 1.0 M this month. August's positive flow came from ordinary-sized buying spread across 290 investors, not a handful of large tickets.

# AUM down 56% in eight months, then two flat-to-up

PLATFORM AUM, AVERAGE DAILY BALANCE PER MONTH · RP BILLION · EXCL. RAIZ, 2 FUNDS

Same recut as last month — **average daily balance**, not month-end snapshot. August closed at Rp 253.7 B (+3.1%) and September's first 9 days (\*) are running higher still, Rp 263.8 B — the first sustained flat-to-up stretch since the decline began. Feed starts 14 January 2026, still no year-on-year comparison until 2027.

# Revenue turned up with AUM

PLATFORM FEE REVENUE, APERD SHARE · RP MILLION PER MONTH · EXCL. RAIZ, 2 FUNDS

Fees accrue daily off the balance, so a month that ends higher earns more the whole way through. August is **+6.3% against July** — the first month-over-month increase since March — though still **-58% against the March peak** (Rp 374 M). September's dashed bar is a 9-day run-rate, projecting to **~Rp 151 M** — a plateau, not a new leg down.

# No repeat of July's whale event — this time it's broad

July's Rp 50.0 B swing came from two accounts moving Rp 59.5 B between them. August's **+Rp 1.5 B** swing came from nowhere in particular — the single biggest move all month was **Rp 3.0 B**, two orders of magnitude smaller.

| ACCOUNT                         | 31 JUL  | 31 AUG  | CHANGE | REGISTERED |
|---------------------------------|---------|---------|--------|------------|
| Largest single mover*           | 5.0 B   | 2.0 B   | -3.0 B | Jan 2026   |
| Jackson Sulastri <sup>†</sup>   | 21.2 B  | 21.9 B  | +0.7 B | Mar 2023   |
| Everyone else — ~5,174 accounts | 236.1 B | 239.9 B | +3.8 B | —          |

\* Largest single AUM move in either direction across all of August, Rp 5.0 B → Rp 2.0 B. <sup>†</sup> One of July's two large redemptions (jacksonsulastrieipo@gmail.com) — added capital back in August instead of continuing to redeem.

August's turnaround was **broad participation**, not one account reversing course: Rp 69.0 B in buys across 689 orders from 290 different investors, against redemptions of just Rp 20.7 B — a fraction of June and July's sell-off.

# Concentration deepened anyway

TOP 2 ACCOUNTS, TODAY

**27.8%**

of all AUM

TOP 10, TODAY

**51.9%**

of all AUM

TOP 100, TODAY

**84.8%**

of all AUM

TOP-10 SHARE VS JULY

**+9.2 pp**

42.7% → 51.9%, with no whale event this month

THE OTHER END OF THE BOOK

5,156 accounts hold any AUM at all. **3,801 of them hold under Rp 100,000**, and the median is Rp 13,097. The working customer base is roughly **1,355 accounts** above that floor.

WHAT THIS MEANS FOR THE ROADMAP

July's two-account shock wasn't the disease, just the most visible symptom. With no single trigger this time, the book still concentrated **further** at the top-10 level — organic growth among large accounts, not distress.

Still no UTM/channel field, and July's HNWI-support ask for accounts over Rp 1 B has not visibly shipped. Both stand exactly where they stood last meeting.

# August broke the losing streak — September hasn't confirmed it

NET FLOW — BUYS MINUS SELLS · RP BILLION · EXCL. RAIZ

August was the best net-flow month since March, and the first fully positive month in five. Early September has already slipped back to **-3.0 B in 9 days** (pace -10.0 B) — not enough data yet to call a reversal, but flagging it now rather than after next month's numbers land.

# Eight months of decline — but conversion is improving

REGISTERED THAT MONTH, CURRENTLY VERIFIED, AND HOW MANY BOUGHT WITHIN 30 DAYS OF REGISTERING

| MONTH    | REGISTERED | VERIFIED (CURRENT STATUS) | BOUGHT WITHIN 30D |
|----------|------------|---------------------------|-------------------|
| Jan 2026 | 471        | 188                       | 83                |
| Feb 2026 | 236        | 93                        | 32                |
| Mar 2026 | 262        | 106                       | 27                |
| Apr 2026 | 217        | 75                        | 18                |
| May 2026 | 148        | 60                        | 15                |

| Jul 2026 | 125        | 45                        | 15                |
| Aug 2026 | 100        | 55                        | 21                |

AUGUST FUNNEL

100 → 55 → 21

Of August's own 100 registrants: 55% verified, 21% bought within 30 days — both better than July despite fewer people in the door. Lowest registration month on record; late-August's 30-day window hasn't fully closed yet.

GA EVENT REACH, AUG UNINSTALL TRACE

162 first\_open • 209 sessions

This month's GA cut is an event trace for the uninstall cohort, not July's Play Store download/uninstall count — a different pull, treat as directional only.

WE ARE STILL BLIND ON CHANNEL

No UTM or channel field exists on the user record. Not one registration can be attributed to a channel, spend change, or campaign — unchanged from last month's ask.

# Before they uninstalled: how far this cohort got

DISTINCT USERS WHO EVER FIRED EACH EVENT · GOOGLE ANALYTICS, AUG 2026 UNINSTALL COHORT

## PUSH DIDN'T HOLD THEM EITHER

Of the 138 people who received a notification, **78% dismissed at least one** and **20% ever clicked one**. In-app messages barely reached this cohort at all — only 7 people ever saw one, too small a sample to read into.

## A PROMO DIDN'T SAVE THE SALE

Up to **12 people** clicked into a promo screen at some point and still ended up in this cohort — same finding as July, a promo click alone isn't a retention signal.

## SOME LEFT ON PURPOSE

**12 people logged out** manually and **1 cleared the app's local data** before disappearing — a deliberate exit for at least this small group, same pattern as July.

Cohort is the August uninstall population traced in GA. This month's export is marginal per-event distinct-user totals, not a per-user ordered trace like July's — so the step rates above read as "at least X people reached Y," not a strict sequential funnel (a person could finish KYC without a recorded register\_success, for example). GA still doesn't join to registration/KYC/buy in the warehouse, so these remain correlated events, not a proven causal order.

# Referral went from 3% of signups to 52% in six weeks

REFERRAL SIGNUPS ÷ TOTAL REGISTRATIONS, BY MONTH

Two months flat at ~3%, then a step-change in August that's still climbing. Last meeting's cumulative "7.8% of 2026 signups" framing averaged a dead channel with a suddenly-hot one, hiding this. **Something changed in early August** — if the referral page renewal we've asked about since July shipped, this is the result. Worth confirming directly; September's 52% is only 52 people.

## STILL TRUE: REFERRAL CONVERTS BETTER

Across 2026, referral activates at **3.5×** the rate and invests **2.2×** more at the median than organic — real, though smaller than August's reported 4.6×/40×.

## WHAT TO DO WITH THIS

If referral is really working now, it's the highest-leverage lever on the board — 3% of signups two months ago, possibly the majority by October.

# Retention kept getting worse while flow got better

REGISTERED USERS

62,978

EVER TRANSACTED

7,094

ACTIVE LAST 30 DAYS

DORMANT OVER A YEAR

81.6%

| FIRST-BUY COHORT | BUYERS | M+1 | M+2 | M+3 | M+6 |
|------------------|--------|-----|-----|-----|-----|
| Jun 2025         | 43     | 54% | 33% | 28% | 5%  |
| Oct 2025         | 59     | 51% | 31% | 29% | 14% |
| Nov 2025         | 56     | 39% | 36% | 23% | 11% |
| Jan 2026         | 89     | 30% | 12% | 10% | 8%  |
| Mar 2026         | 42     | 33% | 17% | 7%  | 2%  |
| Apr 2026         | 25     | 40% | 16% | 12% | 0%  |
| Jun 2026         | 24     | 33% | 8%  | 4%  | —   |
| Aug 2026         | 18     | 28% | —   | —   | —   |

STILL TWO THINGS WRONG AT ONCE

Cohorts are still **shrinking** — 89 new buyers in January became 18 in August — and M+1 retention keeps sliding: 54% for June 2025's cohort, 28% for August's.

DORMANCY GOT WORSE, NOT BETTER

74.9% dormant over a year in July, **81.6%** now. August's positive net flow ran on new and existing active money — it didn't reactivate anyone.

# A new cohort: who's actually reducing their holdings

The previous slide tracks **repeat buy transactions**. This one tracks **total units held** (all funds, from portfolio\_with\_code, excl. RAIZ + the 2 excluded funds) — it catches partial sell-downs and full redemptions a buy-transaction cohort can't see, and covers everyone who ever held a position, including bonus-only holders.

| FIRST-HOLDING COHORT | HOLDERS | M+1 DECREMENT | M+2 | M+3 | M+6 |
|----------------------|---------|---------------|-----|-----|-----|
| Jan 2026*            | 5,220   | 4%            | 5%  | 3%  | 3%  |
| Feb 2026             | 56      | 16%           | 14% | 16% | 7%  |
| Mar 2026             | 48      | 15%           | 19% | 17% | 10% |
| Apr 2026             | 38      | 24%           | 26% | 24% | —   |
| May 2026             | 24      | 8%            | 50% | 12% | —   |
| Jun 2026             | 26      | 8%            | 23% | 4%  | —   |
| Jul 2026             | 17      | 35%           | 18% | —   | —   |
| Aug 2026             | 23      | 30%           | —   | —   | —   |

READ DIFFERENTLY THAN CHURN

Most cohorts sit at 15–35% decrement by M+1 — the majority keep at least as much as they started with. May's 50% at M+2 is 12 people; too small to read as a trend.

\* JAN 2026 ISN'T A REAL COHORT

The holdings feed starts 14 Jan 2026 — that row is everyone already holding a position when tracking began, not people who started holding that month.

# The fee-rate point is starting to move on its own

| FUND                            | MI       | JUL    | AUG    | FEE   | AUG APERD |
|---------------------------------|----------|--------|--------|-------|-----------|
| Sucorinvest Sharia Balanced     | Sucor    | 48.7 B | 77.5 B | 1.50% | 49.4 M    |
| Sucorinvest Sharia Money Market | Sucor    | 19.5 B | 19.3 B | 1.00% | 8.2 M     |
| Sucorinvest Money Market        | Sucor    | 24.3 B | 17.2 B | 1.00% | 7.3 M     |
| Pinnacle Money Market           | Pinnacle | 12.9 B | 15.4 B | 0.55% | 3.6 M     |
| Trimegah Kapital Plus           | Trimegah | 2.1 B  | 7.3 B  | 4.00% | 12.4 M    |

Trimegah Kapital Plus earns **Rp 12.4 M** on Rp 7.3 B — more than Sucorinvest Money Market's Rp 7.3 M on double the AUM. We flagged this rotation last month; Trimegah's AUM already grew **3.5x** on its own.

CONCENTRATION RISK, STILL

Sucor Asset Management is now **eight of our top twelve funds**, up from five in July.

A CLEANER READ THAN JULY

Revenue rose in step with AUM — no whale rotation clouding the picture, so this reads as genuine mix shift.

# A quiet promo month — and a bigger data gap than last month's

| CAMPAIGN ACTIVE IN AUGUST        | PERIOD       | QUOTA    | BONUS EACH   |
|----------------------------------|--------------|----------|--------------|
| Bonus Live IG Agustus — Sucor AM | 5–12 Aug     | uncapped | not recorded |
| Bonus Live IG — Pinnacle         | 14 Aug–2 Sep | 3        | Rp 100 K     |
| Bonus Promo EMERGENCY SAVEPORTO  | 13–20 Aug    | 85       | not recorded |
| Bonus Promo FESTIVALKISI         | 21–25 Aug    | 29       | not recorded |
| Bonus Promo FESTIVALSAM          | 21–25 Aug    | 29       | not recorded |
| Bonus Promo FESTIVALBAHANA       | 26 Aug–4 Sep | 3        | not recorded |

Excludes evergreen/all-time promo codes (BNSKY, an internal remisier bonus, and a test campaign) whose validity windows span years and would falsely attribute nearly every August purchase to a "campaign."

## 1 of 6

campaigns active in August has a recorded bonus\_amount at all. The other five — including two 29-quota festival promos — have no bonus cost captured in the system.

## ≤ Rp 300 K

maximum exposure on the one campaign we can price (Bonus Live IG Pinnacle: quota 3 × Rp 100 K) — immaterial next to July's Rp 177.6 M PINNACLETOP net cost.

### NOT A QUIET-MONTH COINCIDENCE — A WIDENING DATA GAP

July's ask was to fix the campaigns.used\_quota bug (still reads 0 on every campaign, no exception this month either). This month's finding is worse: **bonus\_amount itself is missing** on five of six active campaigns, not just the redemption counter. Without either field, campaign cost can't be reconstructed after the fact — only the one campaign that happens to have both quota and bonus\_amount set could be priced at all.

# The same eight numbers, one month later

Same eight as last meeting, August's values beside them, RAIZ excluded from all of them. Two are still blocked — and one got harder, not easier.

01 · AVAILABLE

## Net flow

Buys minus sells. August: +48.3 B.

02 · AVAILABLE
